Druck 4Sight2

Calibration and asset management software

4Sight2 from Druck is an easy-to-use, cost effective and scalable calibration management software that is equally effective for single use or global multi-site operations.

4sight2 is designed to empower your organisation to operate simply and securely, connecting your people to instruments, data and enhanced analytics reducing time spent on data entry, planning and the overall calibration process.
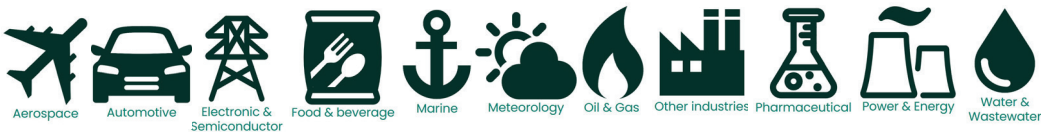

By providing automation and integration capabilities with Druck's portfolio of Test & Calibration equipment 4Sight2 enables you to perform fully paperless calibration with Druck Portable Calibrators, PACE Pressure Controllers and Druck's Temperature Calibrators.

This system reduces time lost by data entry and procedure errors via simple upload of new procedures and download of results. Results are then stored and documented in a custom, secure and traceable way making calibration swift and simple for all users.

Features of 4Sight2 include:

- Uncertainty calculations to provide additional confidence for calibration data in accordance with industry standards.

- The Traceability Report enables speedy investigations of historical calibrations done with a reference standard by facilitating corrective actions.

- Custom view allows users to show/hide, sort, re-order and filter tabular data - when done, data can then be exported in standard file formats.

- Customisable report services allows users to create bespoke certificates with brand-new reports engine

- Historical trending of drift data for interval analysis and predictive decision making.

- User configurable policies allow users to customise key behaviours.

Ideal applications for 4Sight2

Aerospace | Automotive | Electronic & Semiconductor | Food & beverage | Marine | Meteorology | Oil & Gas | Other industries | Pharmaceutical | Power & Energy | Water & Wastewater
